Folks

The attached paper is an in-confidence pre-release version of a paper Robert Morsillo has prepared to be published shortly in the *Telecommunications Journal of Australia* – writing here in his capacity as a fellow of Swinburne University. He is also GM for Consumer Affairs at Telstra and the Secretariat lead for LIMAC.

The paper lays out some of the affordability challenges that may be present on the NBN and as such, it may be a useful summary of some of the issues the Department needs to consider to address barriers to affordability on the NBN.

Happy to discuss.

Duncan
